

METHOD AND SYSTEM FOR ROUTING HARDCOPY MAIL

Abstract of the Invention

A method and system for routing hardcopy mail is provided. Specifically, a recipient is assigned a unique identifier. The recipient can electronically designate a mailing address to be associated with the assigned identifier. A sender wishing to send the recipient a piece of hardcopy mail can obtain the recipient's identifier and affix the same to the piece of hardcopy mail. The identifier will be read and the piece of hardcopy mail will be routed to the recipient at the mailing address associated therewith.
